

## Outside-the-box thinking to support business growth

**“Fixing common issues is one thing, but we need a provider who thinks outside the box to solve our challenges and propel our business forward.”**

When lockdown began in March 2020, we saw an opportunity to leverage our team’s skills to address a real customer issue.

The result was a 3D walkthrough of our data centre, giving an accurate representation of our facility so that customers could effectively come onsite from the comfort of their home office.

But that’s not the first time we’ve thought big.

When you operate your own data centre, problem-solving comes with the territory.

Fortunately for us, we also have the means to fabricate the solutions we come up with.

For example, we designed our own variable flow intelligent floor tiles (VFIT) to mitigate overheating in high-density server room environments. And we recently designed and built a containerised EV charging solution that harnesses renewable energy to enable off-grid vehicle charging.

**In short, we thrive on solving the challenges that others can’t or won’t solve.**
